

SPORTS ARENA BOOKING PLATFORM

Web Development • Booking Workflow • UI/UX

TECHNICAL PROJECT PRESENTATION

Prepared for portfolio / recruiter discussion. Project and implementation details to be verified.

Project Overview

What the platform is, and how it's positioned

What it does

A web platform for discovering sports facilities and managing arena bookings end to end.

How it's designed

Built around a practical booking workflow that serves both everyday users and facility owners.

How it's positioned

Framed as a full-stack web development project, spanning frontend, backend and data design.

SPORTS ARENA BOOKING

Discover facilities.

Book a time slot.

Manage bookings.

Problem Statement

The gaps this platform is designed to close

Hard to discover

Sports facilities can be difficult to find and compare across a city or area.

Availability is unclear

Users need a convenient way to view open time slots and request or book them.

Owners lack structure

Arena owners need organized booking and facility-management workflows.

Core User Flow

From browsing a facility to a confirmed booking

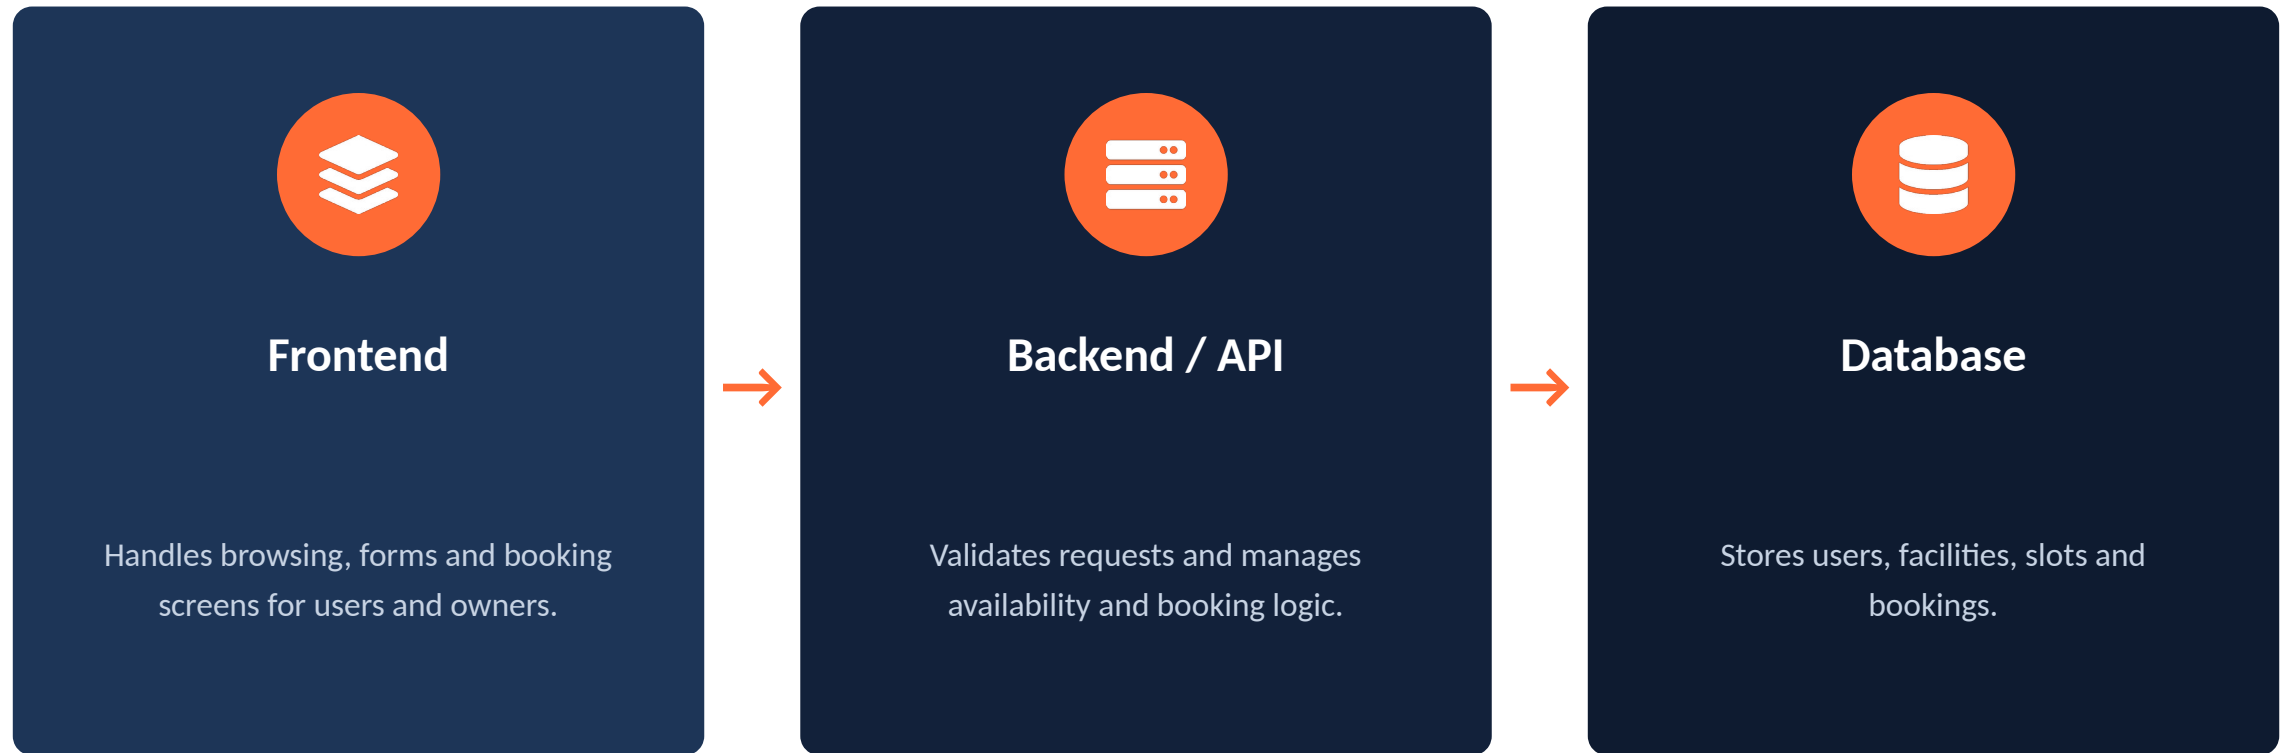

Potential owner flow

Add facility → Manage slots → Review bookings

System Architecture

A standard three-tier web architecture

Potential Data Model

Core entities that back the booking workflow

Users

User identity and account information.

Facilities

Venue, sport, location and pricing information.

Slots

Date, time and availability.

Bookings

User, facility, slot, status and timestamp.

Key Features

Core capabilities, with room to grow

Facility discovery & filtering

Date / time slot selection

Booking workflow

Booking history & status

DESIGNED FOR WHAT'S NEXT

- Authentication
- Payments
- Reviews
- Owner / admin dashboards

Challenges & Learning

What makes this problem genuinely tricky

Preventing double booking

Requires server-side validation — the client can't be trusted to enforce it alone.

Keeping data consistent

Booking data must stay consistent when multiple users request the same slot at once.

Designing for speed

A clean UI matters because the booking process should be quick and easy to understand.

Future Improvements

Where the platform could go next

Online payments

Maps / location integration

Reviews & ratings

Owner dashboard

QR-based booking confirmation

Email / SMS notifications &
deployment

INTERVIEW PITCH

“I designed a sports arena booking platform around the complete customer booking journey, with structured facility, slot and booking data. The main engineering challenge is maintaining reliable availability and preventing conflicting bookings.”
